

BEKA Hospitec shower consoles

Universal shower consoles to complete our showering care systems

BEKA Hospitec shower consoles

The ideal complement to our showering care systems ...

BEKA Hospitec offers exceptional safety and quality standards in the field of bathing and showering. Our shower and bathing systems are a perfect solution for safe, state-of-the-art care ...

Ideal complement to our mobile shower systems

The BEKA Hospitec shower consoles offer an ideal complement to mobile shower systems like the shower trolleys or shower and nursing chairs offered by BEKA Hospitec. An integrated thermostatic mixer allows the showering temperature to be set safely and reliably. The extra long shower hose gives a very large working range, which is especially helpful when using it with our SINA shower trolley, allowing the nurse to shower the resident all over.

Optional integrated disinfection system

An optional integrated disinfection system is used to disinfect the bathing and showering lifts or other showering systems to prevent cross contamination. You can use your in-house, approved concentrated disinfection fluid. A flowmeter control allows adjustment of the fluid concentration.

Easy installation

Conventional water connections are sufficient for the installation of

our shower consoles. A power supply is not necessary, making for easy installation in sanitary facilities and wet rooms.

Different versions – very low space requirements

The BEKA Hospitec shower console is available in different versions, e.g. including an integrated toilet. Here we offer an ideal system solution with a combination of shower console and fully functional toilet, which also can be installed in a toilet for disabled persons. Where space is limited the shower and toilet console offers the perfect solution, providing a complete toilet system which also gives you the ability to shower the resident safely and comfortably with the integrated shower and disinfection unit.

Premium material

Premium GRP material (glass fibre reinforced plastic) produces an extremely solid and stable shower and toilet console. The impermeable, pore-free surface meets the highest hygienic standards and is very easy to clean. The shower console can be used with every standard toilet.

Highest quality and comfort

For ideal nursing and care conditions ...

BEKA Hospitec develops, together with well-known designers, new and innovative devices for nursing and care which improve the working conditions of your nursing staff and increase the well-being and safety of your residents ...

Key benefits for your nursing staff
