

"TROOM"

Testing, Training & Therapy Room

"TROOM"

TROOM is an interactive system comprised by electronic and physical devices capable of –among other things– stimulating the senses, and measuring movement speed and range aided by of voice and facial recognition tools, as well as intelligent management, VR, and feedback devices that provide support in the following areas:

- Medical treatment
- Sports training
- Physical performance testing
- Learning processes

Focus Areas

- Child neurodevelopment
- Autism
- Language disorders
- Sports training
- Physical performance testing
- Elderly adult care
- Special education
- Visual deficiencies

Environments enhance the effects of protocols and methodologies based on best practices, research, and in the experience of specialists in each area of application.

TROOM environments facilitate central nervous system stimulation in individuals with different types and levels of impairments or disabilities, fostering nervous connections, and aiding in the structuring of complex processes such as learning and sensorimotor patterns.

Benefits:

- Standardization
- Objective measurement
- Reproducibility
- Progress-tracking and follow-up
- Flexibility in treatment
- Versatility in individual or group usage, and customization

TROOM Facilities

- Technology suited for worldwide application
- Facial recognition
- Training and certification for clients on clinical protocols
- Modular, customizable design suited to clinics, gyms, sports centers, schools, and other settings
- Cloud updating
- Surround sound system
- Integration of all devices in a single system
- Voice commands
- Integration of medical, sports, and educational protocols
- Augmented reality usage
- IOS® - Android® systems

Our protocols and methodologies, based on best practices and backed by the experience of specialists in each area of specialty and application.
